Experience

The Home Depot

May 2026 – July 2026

Software Engineer Intern

Remote

- Developed a full-stack feature for a nationwide store operations application, enabling associates to monitor real-time health metrics for self-checkout register components using Java, Node.js/Express, Redis, WebSockets, React, Next.js, and Redux.
- Analyzed associate and intern survey data to identify operational pain points and prioritize register health metrics, translating user feedback into product requirements.
- Mentored three software engineering interns, presented to the Store Checkout Women in Technology community, and leveraged GitHub Copilot and Claude while earning DataCamp AI certification.

CAV (Cognition and Visualization) Lab

March 2025 – December 2025

Undergraduate Research Assistant

Atlanta, GA

- Enhanced a D3.js visualization tool using JavaScript and D3.js, fostering dynamic manipulation of visual stimuli for behavioral experiments, thereby improving researcher efficiency and experiment accuracy.
- Engineered a client-side event logging framework with JavaScript to record and export structured interaction data, streamlining analysis workflows for research teams.
- Expanded the research platform's analysis capabilities by integrating behavioral tracking with custom front-end tools, which helped uncover differences in how users interpret different visual conditions.

The Home Depot

May 2025 – July 2025

Software Engineer Intern

Remote

- Engineered an offline switch for POS systems in Java, managing complex network dependencies and simulating offline operation; reduced register recovery time by 37.5% and eliminated manual reboots, deployed in pilot stores for real-world validation.
- Built a real-time Grafana dashboard integrating Prometheus metrics through Java backend services, enabling store leaders to optimize POS performance and improve operational health.
- Executed comprehensive testing of new Java-based POS features at the Marietta Technology Center and live store environments, validating performance and reliability to support deployment across pilot stores for real-world validation.

Technical Projects

BranchingOutAI | *Next.js, Tailwind, JointJS, Supabase, Python, LangGraph, Vercel*

November 2025 – Present

- Built an interactive career path visualization with movable nodes, enabling users to explore 50+ roles and view dynamic trajectories, supporting informed career exploration.
- Implemented AI-powered recommendations using LangGraph and Python to highlight key skills and suggest personalized career paths, delivering actionable, data-driven guidance.

TrAiding Post | *Next.js, Tailwind, Supabase, Python, LangGraph, Vercel*

September 2025 – December 2025

- Developed a multi-agent trading platform front-end that translates complex agent insights into an intuitive interface, saving users several hours per trading decision by providing actionable recommendations without manual research.
- Enabled users to create and configure custom agents, increasing platform flexibility and streamlining strategy testing.
- Integrated LLM-powered APIs with Supabase to deliver personalized, interpretable trading recommendations, improving decision-making speed and confidence.

Analyzing Antisemitism: Insights with ML | *Matplotlib, pandas, scikit-learn*

January 2025 – February 2025

- Cleaned, modeled, and analyzed antisemitism-related datasets (~2,000 entries) using pandas and scikit-learn, identifying trends and predictive patterns to inform advocacy strategies.
- Produced visual analytics with Matplotlib to deliver actionable insights to the American Jewish Committee, supporting data-driven community engagement and policy recommendations.

Core Competencies and Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, C, R, HTML, CSS

Web Development: React, Angular, jQuery, Tailwind, Bootstrap, Figma

Data/AI/ML: pandas, scikit-learn, PyTorch, LangChain, LangGraph, Matplotlib, MATLAB

Tools/Platforms: Git, Docker, REST APIs, FastAPI, Supabase, Vercel, Jira, Excel, Power BI, Tableau

Core Competencies: Full-Stack Development, SDLC, Agile Methodology, Problem Solving, Team Collaboration, Communication, Leadership, Customer-Focused Solutions, Prompt Engineering, Time Management, Organization

Education

Emory University

August 2023 – May 2027

Bachelor of Arts in Jewish Studies, Minor in Computer Science

Atlanta, GA

Relevant Coursework

Data Structures and Algorithms, Analysis of Algorithms, Computer Architecture/Machine Level Programming, Machine Learning, Computer Science Practicum, Discrete Math, Calculus I & II, Multivariable Calculus, Linear Algebra, Numerical Analysis, Mathematical Statistics I

Leadership and Community Engagement

Girls Who Code

September 2024 – Present

Risk/Event Manager, Instructor

Atlanta, GA

- Led weekly coding classes for ~20 girls, designing interactive lessons that built programming skills and fostered curiosity in computer science.
- Mentored students to develop problem-solving confidence and independent coding abilities, empowering them to complete projects and explore creative solutions.
